C;Comment: The LMW kininogen precursor is produced from the same gene as the HMW form at C;Comment: Kininogen is a cysteine proceinase inhibitor, takes part in initiation of the C;Comment: Bradykinin, released from kininogen by kallikrein, is a potent vasodilator, a cyproline residue is present in the kininogen prior to the release of bradykinin.
C;Superfamily: kininogen; cystatin homology

of bradykinin

```
Riningen, HMW I precursor - bovine
N;Alternate names: alpha-2-thiol proteinase inhibitor; preprokininogen
N;Contains: bradykinin (kallidin); kininogen I; kininogen II; prokininogen
C;Species: Bos primigenius teaurus (cattle)
C;Date: 14-Nov-1983 #sequence revision 14-Nov-1983 #text_change 09-Jul-2004
C;Accession: A01281; A91923; A91938; A29559
R;Kitamura, N.; Takagaki, Y.; Furuto, S.; Tanaka, T.; Nawa, H.; Nakanishi, S.
Nature 305, 545-549, 1983
A;Title: A single gene for bovine high molecular weight and low molecular weight kininog
A;Reference number: A93317; MUID:84014106; PMID:6571699
A;Accession: A01281
A;Molecule type: mMNA
A;Residues: 1-621 <KIT-

c induced aggregation of thrombocytes; (4) the active peptide

contraction, that is released from HMW-kininogen shows a variety of

c physiological effects: (4A) influence in smooth muscle

contraction, (4B) induction of hypotension, (4C) natriuresis and

c diuresis, (4D) decrease in blood glucose level, (4E) it is a

mediator of inflammation and causes (4E1) increase in vascular

permeability, (4E2) stimulation of nociceptors (4E3) release of

other mediators of inflammation (e.g. prostaglandins), (4F) it has

c chardioprotective effect (directly via bradykinin action,

indirectly via endothelium-derived relaxing factor action); (5)

LMW-kininogen is in contrast to HMW-kininogen not involved in blood

PTM: Bradykinin is released from kininogen by plasma kallikrein.
SIMILARITY: Contains 3 cystatin-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Name=LMW

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: Kininogens are plasma glycoproteins with a number of functions: (1) as precursor of the active peptide bradykinin they effect smooth muscle contraction, induction of hypotension and increase of vascular permeability. (2) They play a role in blood coagulation by helping to position optimally prekallikrein and factor XI next to factor XII. (3) They are inhibitor of thiol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of the T-II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   II synthesis is induced and the pkininogen I is raised.
